

## Use Case: Search

Primary Actors: end user, admin

Preconditions: user is logged on and at main page

Postcondition: system is displaying search results page

Main Success Scenario:

1. user clicks "Search Music Collection" link
2. system displays search page
3. user submits search criteria
4. system displays search results page with matching songs that the user owns

Extensions:

- 3a. user submits search criteria that has no matching songs
- 4a. system displays search results page with message indicating no results

View Music Collection use case would be exactly the same except user clicks "view Music Collection" and then a search is submitted w/ the only criteria is the user name.
