Use Case : Manage Users

Primary Actors : admin

Preconditions : admin is logged on and
viewing main page

Post conditions   a user the admin deleted
is   removed from the system

Main Success Scenario :

1. user selects "Manage Users" link
2. system displays list of all users
3. user chooses delete option for a user
4. system displays confirmation that user was deleted and
refreshes the list of users

Extensions :
3a: user chooses delete option for her/himself
4b: system displays message indicating that you can not
delete your account.

1. &: getAllUsers(): List<String>   :Controller

3. message: deleteUser (userToDelete: String
current User : String): String

↓2. &: getAllUsers(): List<String>

↓4. b: deleteUser(user To Delete : String,
current User: String) : Boolean

:QueryDB   returns true
iff user was
successfully deleted

Controller	QueryDB
List<String> getAllUsers();	List<String> getAllUsers();
String deleteUser (String user To Delete, String Current User);	Boolean deleteUser (String user To Delete, string current User);
